

## Manufacturing/Field Technician – Experienced

---

Millennium Control Systems, LLC (MCS) offers turn-key automation solutions including engineering, manufacturing, and onsite installation/commissioning. Millennium is a recognized leader in providing engineered control systems and software solutions for the glass, metals, tire & rubber, pulp & paper and building products industries. Founded in 1997, MCS has demonstrated expertise in analysis, planning, project management, design, and support services. We have been consistently meeting and exceeding customers' expectations since then. We are a growing company headquartered in an attractive and convenient suburb of Cleveland with offices also located in the Atlanta area and satellite locations around the country.

As an engineering company, we continuously pursue innovative ways to leverage our expertise. We provide control systems and application solutions that range from complete system design and implementation to existing system expansion and upgrades, from application and software development to start-up and commissioning. Our commitment does not end at the commissioning – we provide extensive after start-up service and support.

Our process is simple. First and foremost, we begin with an understanding of our client's needs so we can help our clients achieve their goals. Then we deliver. Our philosophy of keeping the same personnel involved from design inception through commissioning and order completion ensures continuity and reduces potential risk. The results speak for themselves.

Millennium Control Systems is seeking an experienced Manufacturing/Field Technician. This position requires an energetic and detail-focused individual that wants to be a part of a growing team and company. We offer professional challenges, personal rewards, competitive compensation, and a comprehensive benefits package that includes Health, Dental, Vision, 401(k) with company match, paid time off, and holidays.

### **Roles and responsibilities:**

- » Must be willing to work at customer site
- » Interact and communicate well with co-workers, customers, and vendors
- » Work directly with team managers, hardware, and project engineers
- » Participate in manufacturing checkout and customer shop tests as required
- » Maintain company standards for quality
- » Exercise safe electrical habits

### **Requirements** (including but not limited to):

- » Interpret data from electrical and mechanical diagrams and schematics
- » Drill and mount electrical components including circuit breakers, transformers, relays, contactors, terminals, VFD's, input/output devices, and/or all other related industrial control devices
- » Perform wiring of electrical components and cable assemblies
- » Strong mechanical aptitude and wiring fundamentals
- » Must be familiar with wire color, ratings, and routing
- » Must be able to work independently and as part of a team
- » Ability to interact with customers and vendors while representing company in a professional manner
- » Responsible, reliable, and flexible in order to best service customer's requirements and project deadlines
- » Understanding of NEC & NFPA79 codes
- » Valid driver's license
- » Drug free

**Education and Experience:**

- » Two (2) years of professional electrical panel building experience preferred

We look forward to your application.
